RAJDEEP SANYAL

+91 9163472586 | rajdeepsanyal24@gmail.com | linkedin.com/in/rajdeepsanyal | github.com/rajdeep-2004

PROFESSIONAL SUMMARY

Data analyst with hands-on experience in Python, SQL, Tableau, and ETL pipeline development. Skilled in statistical analysis, data visualisation, and EDA across large-scale datasets. Seeking a junior data analyst role to apply machine learning, regression analysis, and dashboard design skills to drive data-driven decision-making.

SKILLS

Technical: Python, SQL, Pandas, NumPy, scikit-learn, Statsmodels, Tableau, Excel, Google Sheets, Git, Jupyter

Analytical: ETL pipelines, data wrangling, EDA, statistical analysis, hypothesis testing, regression analysis, k-means clustering, data visualisation, dashboard design

PROJECTS

RHoMIS Food Security Analytics *| Python, Pandas, NumPy, scikit-learn, Tableau*

- Analysed food insecurity across 54,873 households in 35 countries (2015-2023) using EDA and hypothesis testing
- Built 5-stage ETL pipeline reducing 1,599 raw variables to 46 analytical features through data wrangling and data cleaning
- Applied logistic regression (OR 0.456, $p<0.001$) and k-means clustering ($k=6$) to identify 6 household vulnerability profiles
- Identified 67.7% household food shortage rate; irrigation access reduces risk by 17.4 percentage points
- Visualised findings in an interactive Tableau dashboard with choropleth maps and income analysis across 35 countries
- Published dashboard at public.tableau.com/app/profile/rajdeep.sanyal/viz/RHoMISDASHBOARD

Electricity Generation and Renewable Transition Analysis *| Python, Pandas, Tableau, Excel*

- Analysed India's electricity generation mix (2006-2020) across 5 regions and 29 states using Python and Excel
- Identified 54.83% renewable utilisation, 65.38% coal dependency, and 6.22% CAGR via statistical analysis and EDA
- Built Tableau dashboards covering generation trends, fuel dependency, and renewable energy potential by source
- Performed data wrangling and data cleaning on multi-source datasets to produce a unified, analysis-ready data pipeline

EDUCATION

B.Tech in Artificial Intelligence - Newton School of Technology, Rishihood University *2024-2028 | GPA: 7.85/10*

ACHIEVEMENTS

- Secured 2nd place at GDG Ideathon 'Idea Verse 1.0', Rishihood University - pitched a data-driven product solution
- Finalist, Ground Zero 1.0 Hackathon (Masters Union x SuperYou) - shortlisted from national pool of applicants
- Finalist, Product Paradox Hackathon (BITS Pilani) - competed against teams from top engineering institutions
